February 25, 2011

**March 24, 2011 – Woodbridge, NJ - Workshop on the Role of Combined Heat & Power and Waste Heat Recovery – New Jersey Manufacturing Competitiveness**

On behalf of the Industrial Energy Consumers of America (IECA) and the US Department of Energy (DOE), we invite you to participate in a very important workshop and dialogue on policy solutions to increase use of combined heat and power (CHP) and waste heat recovery in New Jersey - to increase competitiveness, jobs and energy efficiency in the manufacturing sector. The workshop will discuss policies to develop new generation units and fully utilize existing units. There is no cost to attend.

The program will bring together key stakeholders that support greater use of CHP and waste heat recovery. The event is scheduled for March 24, 2011 at the Renaissance Woodbridge Hotel, 515 US Highway 1 South · Iselin, New Jersey 08830. Special room rates are available at \$109.00. The hotel telephone number is 1-888-236-2427.

The workshop is organized by manufacturing companies whose competitiveness, in part, is dependent upon the cost of energy. We welcome policy makers, manufacturing companies, project developers, equipment suppliers, electric utilities, environmental groups and others to participate in the dialogue.

Please confirm your participation by email: [pcicio@carbonleaf.net](mailto:pcicio@carbonleaf.net). 202-223-1661

Sincerely,

Paul N. Cicio  
President

-----

*The Industrial Energy Consumers of America is a nonpartisan association of leading manufacturing companies with \$800 billion in annual sales and with more than 750,000 employees nationwide. It is an organization created to promote the interests of manufacturing companies through research, advocacy, and collaboration for which the availability, use and cost of energy, power or feedstock play a significant role in their ability to compete in domestic and world markets. IECA membership represents a diverse set of industries including: plastics, cement, paper, food processing, brick, chemicals, fertilizer, insulation, steel, glass, industrial gases, pharmaceutical, aluminum and brewing.*
